

1) Alur Kerja

- Definisikan fungsi  $f(x)$
- Tentukan nilai  $a$  dan  $b$
- Tentukan nilai toleransi  $\epsilon$  dan maks  $N$
- Hitung  $f(a)$  dan  $f(b)$
- Jika  $f(a) \cdot f(b) > 0$ , proses dihentikan, jika tidak proses dilanjutkan
- Hitung  $x_r = \frac{a+b}{2}$
- Hitung  $f(x_r)$
- Jika  $f(x_r) \cdot f(a) < 0$ , maka  $b = x_r$  dan  $f(b) = f(x_r)$ , jika tidak  $a = x_r$  dan  $f(a) = f(x_r)$
- Jika  $|b-a| < \epsilon$  or iterasi  $> N$ , maka proses dihentikan dan didapatkan akar  $x_r$ . Jika tidak maka utangi langkah 6.

Iterasi 1:

$$a = 2.4$$

$$f(a) = (2.4)^3 + 10(2.4) + 8 = -2.176$$

$$b = 2.7$$

$$f(b) = (2.7)^3 + 10(2.7) + 8 = 0.683$$

$$x_r = 2.55$$

$$f(x_r) = (2.55)^3 + 10(2.55) + 8 = -0.91863$$

$$\text{Kondisi: } F \mid f(x_r) \cdot f(a) > 0 = F$$

Iterasi 2:

$$a = 2.55$$

$$f(a) = (2.55)^3 + 10(2.55) + 8 = -0.91863$$

$$b = 2.7$$

$$f(b) = (2.7)^3 + 10(2.7) + 8 = 0.683$$

$$x_r = 2.625$$

$$f(x_r) = (2.625)^3 + 10(2.625) + 8 = -0.16211$$

$$\text{Kondisi: } F \mid f(x_r) \cdot f(a) > 0 = F$$

Iterasi 3:

$$a = 2.625$$

$$f(a) = (2.625)^3 + 10(2.625) + 8 = -0.16211$$

$$b = 2.7$$

$$f(b) = (2.7)^3 + 10(2.7) + 8 = 0.683$$

$$x_r = 2.6625$$

$$f(x_r) = (2.6625)^3 + 10(2.6625) + 8 = 0.249213$$

$$\text{Kondisi: } F \mid f(x_r) \cdot f(a) > 0 = T$$

Iterasi 4:

$$a = 2.625$$

$$f(a) = (2.625)^3 + 10(2.625) + 8 = -0.16211$$

$$b = 2.6625$$

$$f(b) = (2.6625)^3 + 10(2.6625) + 8 = 0.249213$$

$$x_r = 2.64375$$

$$f(x_r) = (2.64375)^3 + 10(2.64375) + 8 = 0.40763$$

$$\text{Kondisi: } F \mid f(x_r) \cdot f(a) > 0 = T$$

Iterasi 5:

$$a = 2.625$$

$$f(a) = (2.625)^3 + 10(2.625) + 8 = -0.16211$$

$$b = 2.64375$$

$$f(b) = (2.64375)^3 + 10(2.64375) + 8 = 0.40763$$

$$x_r = 2.63438$$

$$f(x_r) = (2.63438)^3 + 10(2.63438) + 8 = -0.06137$$

$$\text{Kondisi: } T \mid f(x_r) \cdot f(a) > 0 = F$$

Iterasi berhenti dikarenakan kondisi dipenuhi.

Dan diketahui nilai akar adalah 2.63438.
